

Redaction Studio

PRODUCT DATASHEET | SEPTEMBER 2026

Prepare, inspect and redact document collections in a controlled desktop workflow with human review at the centre.

BEST FOR

Document-production teams, reviewers, litigation support and privacy operations.

DEPLOYMENT

Standalone customer-controlled workbench for teams that want the redaction workflow operated within their own desktop environment.

WHAT IT DELIVERS

- Combines OCR-assisted identification with an operator-controlled review and editing experience.
- Displays source documents at high clarity and accommodates mixed page sizes without forcing awkward horizontal navigation.
- Keeps redaction decisions visible so a reviewer can inspect, adjust and approve the final output.
- Supports large-document navigation and a familiar production workflow designed to reduce waiting between review steps.

CONTROLLED WORKFLOW

- Load. Open the document collection and prepare pages for analysis.
- Detect. Use OCR and configured detection logic to propose material for redaction.
- Review. Inspect each proposed redaction against the page; add, remove or adjust as required.
- Finalise. Produce the redacted output only after an authorised reviewer completes the workflow.

TECHNICAL AND BUYER NOTES

OPERATING MODEL

Standalone desktop workbench rather than a vendor-hosted account.

DOCUMENT HANDLING

High-resolution viewing, responsive navigation and mixed-page-size support.

CONTROL POINT

The model proposes; a human reviewer remains responsible for the final redaction decision.

FIT

Best suited to organisations that want direct operational control of the workstation and document flow.

SCOPE NOTE

Exact supported formats, OCR configuration, deployment prerequisites and licensing are confirmed during solution review.
